# REQUEST FOR QUALIFICATIONS

The City of Phoenix is seeking up to three qualified electrical engineering consultant teams and/or an instrumentation and controls system integrator to provide design support, construction inspections, and commissioning testing for projects associated with electrical, instrumentation and control systems for the Water Services Department. The project sites are located at three water treatment plants. The City expects to award one contract for each water treatment plant. No firm will be awarded more than one contract. Selected firms will not be awarded a contract for a site where they have previously assisted with design.

## **SECTION I – PROJECT DESCRIPTION**

To improve the functionality, efficiency, and maintenance of the electrical, instrumentation and control systems, the City utilizes inspection and testing services to assist the Engineer and Contractor with projects related to the water facilities and their various systems. The City has developed electrical, instrumentation and control standards for the entire Water Services Department which are used to provide consistency. Part of the selected consultant's role will be to ensure adherence to these standards on all projects during the design, construction, calibration, testing, and commissioning of these systems.

## **SECTION II – SCOPE OF WORK**

The selected firms will: attend design meetings and project engineering demonstrations; support the engineer with research of existing conditions; conduct 60%, 90% and 100% reviews of the project plans and specifications; and support the engineering consultant with the understanding of the Water Services Department's standards for electrical, instrumentation and controls systems and requirements to maintain the standards if revisions or acceptable changes have occurred during the design review process.

Construction support services consist of reviewing equipment submittals, conducting reviews on the equipment installation, providing field observations reports, participating in factory testing, reviewing the completeness of required equipment testing documentation and witnessing the instrumentation calibrations and loop checks.

Commissioning support services consist of providing assistance on computer control strategy checkout, tuning of control loops, performing loop tests, troubleshooting for the computer control system programmers, maintaining designated instruments through final acceptance, educating the plant staff on the systems, supporting the maintenance staff on developing maintenance procedures for designated equipment and reviewing the accuracy of the as-built documentation for electrical drawings and the process & instrumentation diagrams.

In addition, the selected consultant will provide operations and maintenance support when City staff are replacing existing equipment or installing new equipment.

### **Additional Services:**

The selected firms may be required to provide arc flash hazardous testing services utilizing a professional electrical engineer. The arc flash hazardous testing will include developing as-builts for existing single line diagrams, conducting load calculations for motor control centers, switchgear and power panels, and conducting a power system study. The selected firm will be required to access energized equipment and provide all arc flash safety personal protective gear that meets the requirements of NFPA.

The selected firms will be required to develop as-builts for existing control panels and design control panels. The selected firms will be required to understand UL508 requirements.

The selected firms will be required to participate on the Water Services Department Process Controls Standards Committee and develop standards for this committee or participate in standards development.
